

Store: C is atom or $C \in \mathcal{N}_{n-2}$

$$\frac{C, \Gamma \uparrow \Theta \vdash \cdot \uparrow \Delta}{\Gamma \uparrow C, \Theta \vdash \cdot \uparrow \Delta} s_l$$

Asynchronous phase (formulas in \mathcal{P}_{n-1})

Invertible rules are applied eagerly

$$\frac{\Gamma \uparrow B_1 \vdash \cdot \uparrow \Delta \quad \Gamma \uparrow B_2 \vdash \cdot \uparrow \Delta}{\Gamma \uparrow B_1 \wedge^- B_2 \vdash \uparrow \Delta} \vee_l^+$$

Synchronous phase (B is \mathcal{N}_n)

Focusing persists

$$\frac{\Gamma \vdash B_i \Downarrow \Delta}{\Gamma \Downarrow B_1 \wedge^- B_2 \vdash \Delta} \wedge_l^-$$
